Gas turbines

Service Kits

The foundation of your stock

Based on the scope of the preventive service and maintenance measures for your MAN Diesel & Turbo gas turbine unit and the longstanding experience of its field service representatives, MAN PrimeServ has combined spare parts regularly used for performing the scheduled inspections and assembly work into so-called service kits.

Complete storage of any spare part that may be required for your MAN Diesel & Turbo gas turbine unit is simply not possible due to economical and logistical reasons.

In order to simplify your spare parts management and to enable you to have the most important spare parts for typical service and maintenance work directly available on-site, MAN PrimeServ has defined specific service kits for each module of your MAN Diesel & Turbo gas turbine.

As well as replacement parts these service kits contain consumables regularly used during the scheduled inspections of the gas turbine and during assembly work. The content of each service kit is put together by considering the typical scope of these service and maintenance measures and the longstanding experience of the MAN PrimeServ field service representatives.

Recommendation

Regardless of whether stocking any other spare parts as strategic spares or consumables for routine maintenance work, a complete set of service kits dedicated to your MAN Diesel & Turbo gas turbine should always be available on-site to make the bare turbine accessible at any time. For this reason, service kits, from which individual components have been removed during service and maintenance work, should immediately be refilled by purchasing the used components.

Customized kit list

MAN PrimeServ will provide you with a detailed listing of the service kits recommended for your MAN Diesel & Turbo gas turbine. The listing will be provided as a stand-alone service kit recommendation or as a central element of a comprehensive spare parts concept taking into consideration your individual operational requirements and maintenance strategy.

Advantages

The service kits are the foundation of the spare parts stock for your MAN Diesel & Turbo gas turbine unit:

- Simplified spare parts management
- Direct access to the most important spare parts for typical inspection and assembly work on the bare turbine
- Dedicated service kit for each module of your MAN Diesel & Turbo gas turbine
- Content exactly matched to typical service and maintenance work
- Easy and cost-saving refill of service kits through individual rebuy of used components
